## ALTITUDE

- Adaptative Cruise Control
- Rear Parking Radar
- Rearview camera with dynamic guide lines
- Smart Beam® High Beam Assist
- Selec-Terrain® Driving Mode Menu
- 7.4 kW internal vehicle charger (AC)
- Mode 3 Charging Cable
- Black hem and arch moldings
- LED Headlights
- LED daytime running lights
- LED Tail Lights
- Digital Instrument Panel 10.25"
- Electric window lifters front and rear
- Automatically dimming interior mirror
- Uconnect™ Infotainment System with 10.1" Touch Screen
- Android Auto and Apple CarPlay wireless ready
- Automatic air conditioning
- Heated steering wheel
- Keyless startup
- Keyless locking
- Rain sensor
- Driver's seat 6-way adjustments
- Front passenger seat 6-way adjustments
- Electric lumbar support adjustment in the driver's seat
- Canvas/vinyl seats
- Two part folding rear seat backrest
- 18" alloy wheels with 235/50R18 tires

## SUMMIT (in addition/instead of ALTITUDE)

- Burglar alarm
- Glossy black hem and arch moldings
- Tinted rear windows
- Roofbars
- LED headlights with projector technology
- LED fog lights with cornering light function
- Driver's seat 8-way electrical adjustments with memory slots
- Front passenger seat 8-way electric adjustments
- Electric lumbar support adjustment in the front passenger seat
- Cooling of the front seats
- Leather seats
- Three-section folding rear seat backrest
- 19" alloy wheels with 235/45R19 tires

# TECHNICAL DATA

PHEV 4x4 AT6

## GASOLINE ENGINE

Displacement cm3	1 332
Type	4-cylinder in-line engine
Valves/cylinder pcs	4
Power, kW (hp) /k/min	132 (180) / 5 750
Torque, Nm/k/min	270 / 1 850

## ELECTRIC MOTOR

Type	Permanent Magneted Synchronous Motor
Power, kW (hp)	44 (60)
Torque, Nm	250

## HIGH VOLTAGE BATTERY

High Voltage Battery Type	Li-Ion (Li-Ion)
Total capacity of high-voltage battery, kWh	11,4
Internal charging device (AC), kW	7.2 1-phase
Charging plug	IEC 62196-2 (Type 2)

## TOTAL POWER OF THE HYBRID SYSTEM

Power, kW (hp)	176 (240)
----------------	-----------

## GEARBOX

Type	Automatic
Number of gears	6

## BRAKES

Front	Cooled disc brakes
The back	Disc Brakes

# TECHNICAL DATA

PHEV 4x4 AT6

## MASSES

Own mass, kg	1 935
Total mass, kg	2 400
Trailer mass, unbraked, kg	600
Trailer mass, with brakes, kg	1 325
Roof load, kg	70

## PERFORMANCE

Top speed, km/h	200
Acceleration 0 — 100 km/h, s	7,9

## FUEL CONSUMPTION AND EMISSIONS, WLTP

Operating radius with electricity km	51 - 52
Fuel consumption, weighted l/100 km	1,7
Electricity consumption, weighted kWh/100 km	15,6 – 16,0
CO <sub>2</sub> emission, weighted g/km	38 - 39

# DIMENSIONS

PHEV 4x4 AT6

## EXTERNAL DIMENSIONS

Length (mm)	4 394	
Width (mm)	1 819	
Height (mm)	1 638	1 649
Wheelbase (mm)	2 636	
Track width front/rear (mm)	1 547 / 1 542	
Ground clearance (mm)	201	
Turning circle diameter (m)	11,1	

## TERRAIN FEATURES

Approach angle	16
Crossing angle	18
Filing angle	32
Wading depth, mm	406

## INTERNAL DIMENSIONS

Passenger seats	5
Trunk volume with rear seat in normal position (l)	420
Trunk volume with rear seat folded down (l)	1 230
Fuel tank capacity (l)	42,5

# TECHNICAL GLOSSARY

Jeep® reinvents all-wheel drive by combining its legendary 4x4 expertise with a powerful electric motor. Fuel consumption and emissions are reduced and safety, performance and efficiency are improved. Jeep 4xe opens the door to a new world of mobility solutions.

The design of the vehicle, in which the electric motor and battery are integrated on the rear axle without any mechanical connection between the front and rear axles, allows for optimum fuel efficiency.

The 4xe system ensures the stability and maneuverability of the vehicle in all driving situations thanks to variable torque adjustment. In hybrid mode, all-wheel drive is guaranteed at any battery level.

The e-Coasting function uses the energy generated in braking to charge the battery while driving.

The whole system is designed so that the torque is high at low speeds, as the electric motor produces full torque as soon as the vehicle starts.

## Selec-Terrain® Assist System

Selec-Terrain® coordinates and optimizes the vehicle's various systems according to the surface, using algorithms that ensure the best possible control and performance.

- Auto: Standard mode, perfect for everyday driving and uses a rear-axle electric motor to turn on the electric 4x4 system when needed.
- Sport: This dynamic driving mode offers even more driving pleasure by adjusting steering, sharpening throttle response and changing shift points to make the most of power and torque.
- Snow: In this mode, all-wheel drive is activated, which minimizes oversteer, maintaining traction and stability.
- Sand + mud: Maximum traction at low speeds.

# COMPASS

The information contained in this brochure corresponds to the technical characteristics of the vehicle in force at the time of publication.

Jeep reserves the right to change prices, specifications and equipment without prior notice

The declared consumption values for car models have been measured using a test defined by EU law (WLTP) at an independent research institute. Consumption values are intended for comparison between different car models. They are based on a measurement that mimics average driving and cannot accurately describe the vehicle's consumption per incident and driving style when driving in traffic. The CO<sub>2</sub>, operating distance and consumption readings indicated in the price list and technical data are individual and may vary. Factory accessories may also affect the vehicle's CO<sub>2</sub> emissions, operating distance or fuel consumption. The certificate of conformity of the individual of the car being traded contains the CO<sub>2</sub> value, fuel consumption data and, in the case of electrified power lines, the operating radius with electricity.

In practical driving situations, the vehicle's energy or fuel consumption and operating distance are affected by factors such as the proportion of electric driving, charging, the driver's driving style, driving speed, temperature, preheating, weather and driving conditions, loading and maintenance performed on the car. Therefore, consumption and operating distance may differ significantly from the declared values. If the car is used, for example, at high speeds for towing a trailer or in cold winter conditions on short journeys without preheating, its consumption may be several times higher than stated. Failure to recharge can also shorten the life of the powertrain battery.

Electric and hybrid cars incorporate new technologies and features that may be subject to limitations in use and operation compared to an internal combustion engine car. These can be caused by things such as high running speed, successive charges or operation in hot or cold conditions. Restrictions are used, for example, to protect vehicle technology. Information about the use and storage of the car can be found in the car model-specific user manual.

The capacity of the powertrain battery used as an energy source in an electric or hybrid car is reduced due to natural wear and tear. Battery capacity and durability are affected by factors such as ageing, mileage, mode of use and degree of charge.

The service life of an electric power line or its individual components may be shorter than that of the car as a whole, especially in heavy use or under challenging operating conditions. Stressful use can include frequent use of maximum performance, or keeping the battery charge level full or empty for long periods of time. Challenging operating conditions can include particularly cold or warm driving conditions.

Actual charging power and time may vary from the indicated guide value. They depend, for example, on the charging point used, the temperature, the use of the car, the charge and temperature of the battery, and the frequency of successive charges. The maximum instantaneous charging power may differ markedly from the average charging power.

The purchase of a separate home charging station is recommended. The charging devices manufactured or recommended by the automaker are designed to work optimally with your car. When purchasing a charging device, please take into account any limitations imposed by the property on the charging speed of the car. Rechargeable power may be lower than the maximum charging power of the car, for example due to limitations of the charging station or the electrical interface of the property. A home charging station must always be installed by an electrical professional.
